Patent No. 5951455

GENERAL INFORMATION:
APPLICANT: Lex M. Cowsert
TITLE OF INVENTION: ANTISENSE MODULATION OF G-APLHA-11 EXPRESSION
FILE REFERENCE: RTS-0030
                                                                                                                                                                                                                                                                                                                      US-08-009-263C-32/C

US-08-009-263C-32/C

Sequence 32, Application US/08009263C

Patent No. 5442049

GENERAL INFORMATION:

APPLICANT: Kerin Anderson, Kenneth Draper, Brenda Baker

TITLE OF INVENTION: Oligonuclectides for Modulating the

TITLE OF INVENTION: Effects of Cytomegalovirus Infections

NUMBER OF SEQUENCES:

ADDRESSEE: Mocdcock Washburn Kurtz

ADDRESSEE: Macklewicz & No. 5442049ris

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 111. Application US/08400580A

Patent No. 5693501

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Jang, Bingdong
TITLE OF INVENTION: Compounds and Methods To Determine
TITLE OF INVENTION: Presence of Histoplasma Capsulatum
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: ALSIA NO. 5693501th College Ave, Ste 213
CITY: Port Collins
STREET: CO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           133 ATGAAGAAGATCAAACG 149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MOLECULE TYPE: DNA (genomic)

Sequence 13, Application US/09092077

Patent No. 6194142

APPLICANT: Moncany, Maurice

APPLICANT: Moncany, Maurice

APPLICANT: Moncany, Maurice

TITLE OF INVENTION: Genome Of Retroviruses Of The HIV-1, HIV-2 And SIV Type,

TITLE OF INVENTION: Genome Of These In Particular For The Amplification Of The

TITLE OF INVENTION: Of The Diseases Due To Those Viruses

NUMBER OF SEQUENCES: 68

CORRESPONDENCE ADDRESS:

ADDRESSE: Pinnegan, Henderson, Farabow, Garrett &

ADDRESSE: Durner N. Henderson, Control of Management Control of Contr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 385
US-09-092-077-11
Sequence 11, Application US/09092077;
Patent No. 6194142
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Moncagnier, Luc
TITLE OF INVENTION: Genome of Retroviruses Of The HIV-1, HIV-2 And SIV Type,
TITLE OF INVENTION: Genome of Retroviruses Of The Applification of The
TITLE OF INVENTION: Genomes Of These Retroviruses And For The In Vitro Diagnosis;
TITLE OF INVENTION: Genomes Of These Retroviruses And For The In Vitro Diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0.8%; Score 13.8; DB 1; Length 20;

Sequence 39, Application US/09851062
Patent No. 6448081
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Breada F. Baker
APPLICANT: Susan M. Freier
TITILE OF INVENTION: ANTISENSE MODULATION OF INTERLEUKIN 12 P40 SUBUNIT EXPRESSION
FILE REPERBNCE: RTS-0247
CURRENT APPLICATION NUMBER: US/09/851,062
CURRENT APPLICATION NUMBER: 2001-05-07
NUMBER OF SEQ ID NOS: 87
SEQ ID NO 39
                                                                                                                GENERAL INFORMATION:
APPLICANT: Monia, Brett P.
TITLE OF INVENTION: Antisense Oligonuclectide Modulation of raf Gene Expression FILE REPERENCE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Sequence 142, Application US/08474542A

GENERAL INFORMATION:
APPLICANT: Gravit, Patti E.
APPLICANT: Gravit, Patti E.
APPLICANT: Manos, M. Michele
APPLICANT: Resmirck, Robert M.
TITLE OF INVENTION: Polymerase Chain Reaction
TITLE OF INVENTION: Polymerase Chain Reaction

NUMBER OF SEQUENCES: 298

CORRESPONDENCES: 40 SEQUENCES: 30 STREET: 340 Kingsland Street

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 21, Application US/09743871B
Patent No. 6627734
GENERAL INFORMATION:
APPLICANT: Memorial Sloan-Kettering Cancer Center
APPLICANT: Memorial Sloan-Kettering Cancer Center
TITLE OF INVENTION: IDENTIFICATION AND EXPRESSION OF MULTIPLE SPLICE VARIANTS OF MOUS
TITLE OF INVENTION: KAPPA3-RELATED OPIOID RECEPTOR (KOR-3) GENE
TITLE OF INVENTION: KAPPA3-RELATED OPIOID RECEPTOR (KOR-3) GENE
TITLE OF INVENTION NUMBER: US/09/743,871B
CURRENT PILING DATE: 2001-01-16
PRIOR APPLICATION NUMBER: US/09/15977
PRIOR APPLICATION NUMBER: 60/093,002
PRIOR PILING DATE: 1996-07-16
NUMBER OF SEQ ID NOS: 26
SOFTWARE: PATENTIN Version 3.0
SEQ ID NO 21

Sequence 11, Application US/08250856A

Patent No. 556285

Patent No. 562855

PAPLICANT: Monia, Brett P. and Boggs, Russell T.

TITLE OF INVENTION: Attisense Oligonuclectide Modulation

TITLE OF INVENTION: Attisense Oligonuclectide Modulation

TITLE OF INVENTION: Attisense Oligonuclectide Modulation

NUMBER OF SEQUENCES: 39

CORRESPONDENCE ADDRESS:

ADDRESSEE: Law Offices of Jane Massey Licata

STREET: 210 Lake Drive Bast, Suite 201

CITY: Cherry Hill

COUNTRY: USA

ZIP: 08002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0.8%; Score 13.6; DB 1; Length 20; 80.0%; Pred. Sequence 10, Application US/08333977

Patent No. 5594108

GENERAL INFORMATION:
APPLICANT: Van Tol, Hubert H.M.
APPLICANT: Civelli, Ollyier
TITLE OF INVENTION: A No. 5594108el Human Dopamine Receptor and Uses
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSE: Allegretti & Witcoff, Ltd.
STREET: 10 South Wacker Drive, Suite 3000
CITY: Chicago
STATE: Illinois
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Patent No. 5849306

GENERAL INFORMATION:
APPLICANT: Sim, Kim L.
APPLICANT: Chitnis, Chetan
APPLICANT: Chitnis, Chetan
APPLICANT: Peterson, David S.
TITLE OF INVENTION: Mallems, Thomas E.
TITLE OF INVENTION: BINDING BOMAINS FROM PLASMODIUM VIVAX
TITLE OF INVENTION: AND PLASMODIUM FALCIPARUM ERYTHROCYTE BINDING PROTEINS
NUMBER OF SEQUENCES: 37
CORRESPENDENCE ADDRESS:
STREET: G20 Newport Center Drive 16th Floor
CITY: Newport Beach
STATE:
COUNTRY: US

Patent No. 5994095
GENERAL INFORMATION:
APPLICANT: Kamb, Alexander
TITLE OF INVENTION: MTS2 GENE
NUMBER OF SEQUENCES: 36
CORRESSEDNIENCE ADDRESS:
ADDRESSED: Venable, Baetjer, Howard & Civiletti, LLP
STREET: 1201 New York Avenue, Suite 1000
CITY: Washington
                                                                                                                                                                                                                                                                                                                         CCUNTRY: US
ZIP: 92660
COMPUTER READABLE FORM:
MEDIUM TYEE: Floppy disk
CCMPUTER: IBM PC Compatible
OPERATURG SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/497,826B
FILING DATE: 10-SEP-1993
CLASSIFICATION NUMBER: US/08/55
ATTORNEY/AGENT INFORMATION:
NAMME: Israelsen, Wed
REGISTRATION NUMBER: OF SES
